Date:

EnergyPeak[®] to Exhibit at Greenbuild International Conference and Expo in Boston

Moon Township, PA... EnergyPeak will join other exhibitors at the 2008 U.S. Green Building Council's Greenbuild International Conference and Expo, November 19-21, at the Boston Convention and Exhibition Center. The Greenbuild conference provides a unique opportunity to connect with other green building experts, peers and leaders.

Greenbuild is the premier venue for those interested in the green building initiative. EnergyPeak, developed by CENTRIA Services Group, will showcase its own latest product in solar energy - a standing-seam, solar-roofing option for commercial buildings that results in energy savings.

EnergyPeak, developed by CENTRIA Services Group, promotes the goals of advancing the efficient and affordable integration of solar technology with standing seam metal roofing, and the adoption of building integrated photovoltaic solar standing seam on behalf of the entire standing seam industry.

The EnergyPeak system integrates UNI-SOLAR[®] brand PV laminates with standing seam metal roofs, satisfying the architectural need for a building-integrated, hassle-free solar roofing option with a return on investment (ROI) in less than 10 years in some states. The result is a practical solar roofing option that can be specified, bid, and installed with minimal effort and investment.

PV laminates are applied in the factory and arrive at the project site already integrated into the roof. Once installed, a building immediately benefits from the solar roofing system and can begin immediately to offset its energy consumption. The pre-designed, affordable and highly efficient solar roofing systems are now readily available to owners and architects through a variety of EnergyPeak providers, comprised of nationwide standing seam manufacturers.

"Attendees of this year's Greenbuild will have the opportunity to learn more about EnergyPeak's solar roofing option solutions and the energy-saving role it can provide in their next standing-seam metal roofing building. The environmental benefits are exceptional especially when considering the quick return on investment," says Rick Mowrey, director of marketing and business development for CENTRIA Services Group.

Join other GreenBuild attendees at the EnergyPeak Booth #2825 in Hall A where there will be a complete EnergyPeak system on display.

For more information on the EnergyPeak system, standing seam manufacturers and building designers should visit www.EnergyPeak.com, or contact Rick Mowrey at 412-299-8101. For more information about Greenbuild, visit <http://www.greenbuildexpo.org/>.

About CENTRIA Services Group:

Based in Pittsburgh (Moon Township, PA), CENTRIA Services Group, is a division of CENTRIA, an international company and the U.S.'s premier supplier of architectural metal wall and roofing systems used in commercial/industrial projects. Since 1906, CENTRIA professionals have provided quality products and services for architectural and construction firms worldwide. For more information about CENTRIA call 412-299-8218 or visit www.CENTRIA.com.

About United Solar Ovonix

United Solar Ovonix, LLC, a subsidiary of Energy Conversion Devices, Inc. (NASDAQ: ENER), manufactures and sells thin-film solar laminates that convert sunlight to energy using proprietary technology. Distributed globally under the UNI-SOLAR(R) brand, the company's products are ideally suited for cost-effective solar roofing solutions because they are lightweight, durable, flexible, can be integrated directly with building materials, and generate more energy in real-world conditions. For more information, please visit www.uni-solar.com (United Solar) and www.ovonix.com (Energy Conversion Devices).
